## App. Development using Angular

Angular turns your templates into code that's highly optimized for today's JavaScript virtual machines, giving you all the benefits of hand-written code with the productivity of a framework. Angular Use modern web platform capabilities to deliver app-like experiences. Build native mobile apps with strategies from Cordova, Ionic, or Native Script. Create desktop-installed apps across Mac, Windows, and Linux using the same Angular methods you've learned for the web plus the ability to access native OS APIs. Angular apps load quickly with the new Component Router, which delivers automatic code-splitting so users only load code required to render the view they request. Quickly create UI views with simple and powerful template syntax. Get intelligent code completion, instant errors, and other feedback in popular editors and IDEs
